

As if amateurs don't have enough to contend with interference from powerlines let alone the eons it takes to get a hint of resolution, now it's this too. American industry is great for taking something off the drawing board and selling it to the public with out any testing or field trial experience. Once it's out there in it's "unproven state" it's too late. Wake up America! Unproven technology costs the American public big bucks never mind the hassle for getting worked over by the big boys. Don't tell me I didn't warn you.
